1. The following is an examiner's statement of reasons for allowance:

Claims 8-9,11,13,15-18,20-21,23,28-29,31-35,37,39-42,44 are allowed over prior art.

Claims 1-7,10,12,14,19,22,24-27,30,36,38,43.

The prior art fails to teach and render obvious the features as claimed in independent claims.

In claims 8, 11, 15, 16, 28:

“estimating a channel condition over a first time window including calculating an average channel condition and a variance channel condition; determining a first transmission rate for transmission of quality messages and a second transmission rate for transmission of differential indicators based on the comparison; transmitting differential indicators independently of quality messages at the second transmission rate, wherein the second transmission rate is greater than the first transmission rate.”

In claim 20:

“a controller configured to determine a first transmission rate for transmission of quality messages and a second transmission rate for transmission of differential indicators based on the comparison,

the differential analyzer further configured to generate quality messages at the first transmission rate, t

the differential analyzer further configured to transmit differential indicators at the second transmission rate independently of quality messages, wherein the second transmission rate is greater than the first transmission rate.”

In claims: 13, 18, 31, 41:

“generating quality messages at a first frequency and differential indicators at a second frequency,

wherein the differential indicators track a quality metric between successive quality messages and wherein the second frequency is greater than the first frequency;

transmitting the quality messages at the first frequency and differential indicators at the second frequency.”

In claim: 44

“the quality message periodically providing a quality metric of a forward link, wherein the differential indicators track the quality metric between successive quality messages and wherein the second rate is greater than the first rate;

a memory storage unit operative to store a quality, message received on the reverse link; and a differential analyzer to update the quality message stored in the memory storage unit in response to the differential indicators and the parity check.”

The reasons for allowance is further supported by the inventive concept as claimed in the instant application wherein the transmission of differential indicators is performed independently at a different transmission rate/frequency than that of the transmission of quality messages, since the periodic transmission of quality messages is provided during designated slots and during other slots when the quality message is not transmitted, the receiver may send a differential indicator. The differential indicator is a shorter message used to identify changes in the quality message. The differential indicator may be a 1 bit/slot indicator, but in general is transmitted several times between each quality message transmission. The provision of both the quality message and the differential

indicator provides the transmitter with frequently updated channel condition information (please refer to the specification [Para 1024])

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to VENKATESH HALIYUR whose telephone number is (571)272-8616. The examiner can normally be reached on Monday thru Friday 10:30AM to 7:00PM.
